
Bleepay for E-Commerce

Overview

Bleepay lets merchants accept crypto payments and receive fiat. Not needing to deal with crypto accounting. Through a familiar payment flow instead of wallet connection, popups and browser extensions.

Why?

Crypto Payments, Without Crypto Complexity.

Bleepay removes the operational and UX friction typically associated with accepting crypto, while keeping merchants fully non-custodial. User pays with any token, you receive fiat.

How Bleepay Works for Merchants

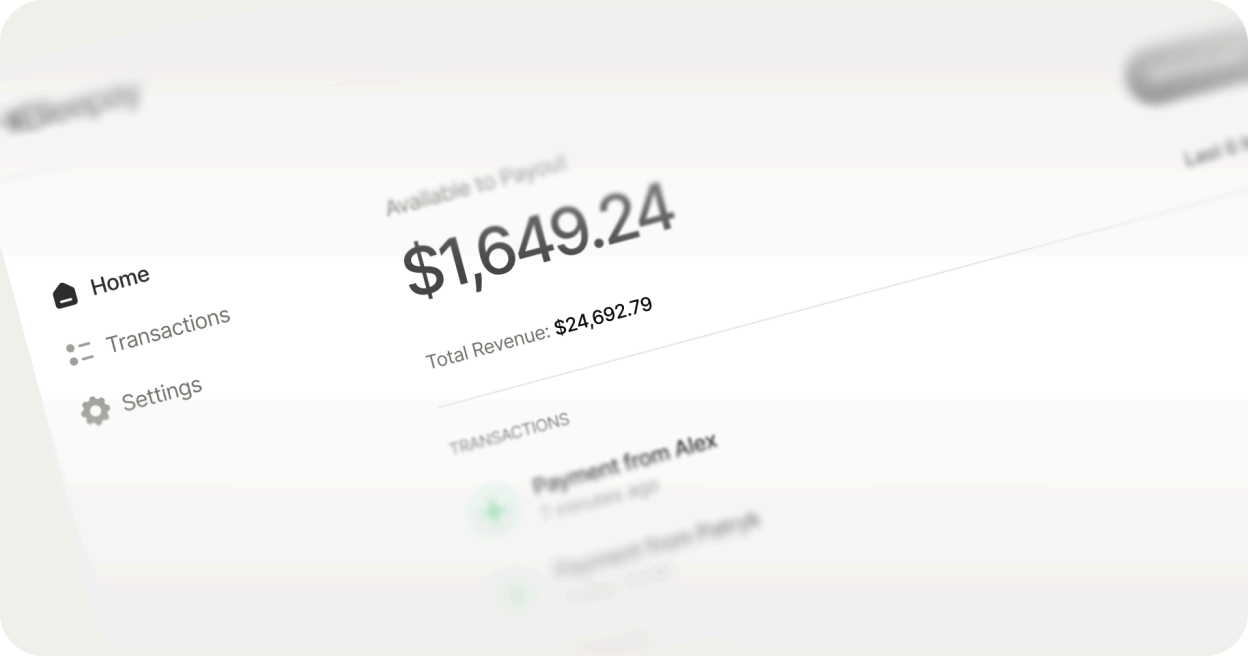
Checkout

Customer shops normal and selects Bleepay at checkout. No wallet connection required on your site.

Payment

Customer enters their six-digit code and confirms the transaction in their wallet. You receive fiat directly to bank account.



Monitoring Dashboard

Track transactions, view revenue, and manage payouts, all in one place. Bleepay handles the crypto, you see the fiat.

Benefits

One simple SDK, integrate in minutes.

Minimal frontend changes

No wallet infrastructure to maintain

Compatible with standard checkouts
