About Bleepay

What Bleepay Is

Bleepay is a new payment system for crypto. Users authorize transactions with a short-lived six-digit code, no browser extensions, no multi-step modals, no complicated infra maintenance.

Use the code to pay at online stores, connect to dApps, make peer-to-peer payments or add an extra verification step before signing. One simple UX across Web2 and Web3.

The Problem

Crypto already works. Paying with it doesn't.

The infrastructure is there. The liquidity is there. But when someone actually wants to buy something, they hit a wall.

Wallet connections break. Browser extensions fail on mobile. Popups get blocked.

Spending crypto should be as simple as spending anything else.

The Solution

Bleepay replaces all of that with a six-digit code.

You generate a code in your wallet. You enter the code at checkout. Done.

> ✨ **No extensions to install.** No connections to maintain. No permissions to grant. Each transaction is authorized individually, your crypto stays in your wallet until the moment you approve the payment.

For merchants, Bleepay works like any other payment method. Add it to checkout, receive fiat directly to your bank account. No crypto to manage, no new systems to learn just another way to get paid.

Crypto in. Fiat out. Simple for both sides.

Crypto has the infrastructure, the liquidity, and the demand ($300B+ in stablecoins). What it doesn't have is a payment experience that works.

Bleepay is the native answer. Simple, non-custodial. The stack is ready. The moment is now.

What Bleepay Is Not

- **Not only a wallet** — Bleepay is a payment method. We built the Bleepay wallet to showcase the experience, but any wallet can integrate it.
- **Not a crypto card** — no deposits, no standing permissions.

Who Built This

The former product team behind LayerZero and Stargate. We've spent five years building blockchain infrastructure, one layer at a time.

LayerZero solved messaging, connecting every chain. Stargate solved liquidity, moving assets seamlessly across networks. Bleepay solves payments, turning all of that into something anyone can actually use.

Three layers. One final solution. This is where it all comes together.
